

Integrated protection for multicloud environments

Cloud security from Microsoft uses the power of a unified platform, deep signal intelligence, and streamlined administration to provide protection for your multicloud resources, workloads, and apps

Using solutions such as Microsoft Defender for Cloud, Microsoft Defender for Cloud Apps, CloudKnox Permissions Management, and GitHub Advanced Security, you can:

Control access to critical apps and resources

Azure Active Directory, CloudKnox Permissions Management, Microsoft Defender for Cloud Apps

Strengthen your security posture

Microsoft Defender for Cloud

Defend against evolving threats

Microsoft Defender for Cloud

Secure every step of the dev lifecycle

GitHub Advanced Security

The impact of Microsoft solutions

50%

50% reduction in time to threat mitigation with Microsoft Defender for Cloud¹

165%

165% return on investment with Azure network security²

3 months

ROI of less than 3 months with Microsoft Defender for Cloud Apps³

Whether you are in the middle of your transition to the cloud or further along in your journey, Microsoft cloud security solutions empower you to achieve your security and compliance requirements across your cloud environment - for both Microsoft and non-Microsoft apps, resources, and services.
